

Viktor

Junior Front End Developer

SUMMARY

I'm Viktor, and I am a front-end web developer with one year experience. I mostly specialize in JavaScript, TypeScript, React.js, Ant Design, HTML, CSS, SCSS, Redux. Knowledge of these technologies allowed me to successfully complete multiple projects. I am friendly, independent, and easily can find common ground with team members, so I have no problem with teamwork. I am an open-minded person, and always ready to learn from more experienced colleagues. If you want a reliable and easy-going team member, then let me help you. Working with me, you will receive an individual approach to your project, attention to detail and daily progress reports.

TECHNICAL SKILLS

Main Technical Skills	JavaScript, TypeScript, React, Ant Design
Programming Languages	JavaScript, TypeScript
JavaScript Libraries and Tools	Mobx, React Native, Redux
JavaScript Frameworks	React
UI Frameworks, Libraries, and Browsers	Ant Design, CSS, HTML, SCSS
Deployment, CI/CD & Administration	Axios
Methodologies, Paradigms and Patterns	Design patterns
SDK / API and Integrations	GraphQL, RESTful API

Interscholastic cycling association back-office application

March 2021 – June 2021

Front-end developer

This project is an easy-to-use web portal for cycling association management and coaches. It's main purpose is to handle coach licensing and association's events.

Main features:

- Create and manage users with different permissions
- Tenants based access to the application for association departments
- Events management and calendar
- Coach licensing module with quiz and progress tracking

Main responsibilities:

- Developing a web portal from scratch with React.js
- Create dashboard screens with essential information about each particular league and department
- Create highly customizable quiz module for coach licencing that included qualification related documents file upload, video player with question/answer forms, question form for spreaded answers, ABC quiz forms
- Create UI for creating editing and deleting Users, Leagues and events
- Permission based access to different parts of an application
- Communication on a daily basis with the product owner, team and project manager from our side in order to get clear specifications
- Analysing requirements from the client side.

Project Team Size: 3 team members

Technologies and Tools: React.js, Redux/Saga, Ant Design, SCSS, CSS, JSX, NPM, Axios

Platform for organizing mountain biking events for middle school and high school.

November 2020 – March 2021

Front-end developer

The project is a platform for organizing events for middle and high schools. It allows organizing competitions more securely for participants and convenient for organizers.

It aims to help sport organizations to grow while ensuring consistent programming, reduced risk liability and data collection for greater security funding opportunities. Everything to ensure long-term quality, relevance and sustainability in quality organization.

Main responsibilities

- Developing a web portal from scratch with React.js
- Design development from scratch
- Role authorization (admin, coach, super admin)
- Development of functionality for creating a league and a team
- Maintain storybook with custom components library
- Pages for training and obtaining licences, with the development of quizzes

Project Team Size: 3 team members

Technologies and Tools: React.js, GraphQL, Ant Design, SCSS, CSS, JSX, HTML, NPM, Axios, storybook, lodash, formik

CRM for Small Business

August 2020 – November 2020

Front-end Developer

This application is a CRM for small businesses with sales through instant messaging systems aiming to make the transition of a customer from a notebook or spreadsheet to an online app as simple as possible, providing a minimum needed set of features to keep the application simple.

This project is a CRM application written from scratch. The application was developed from scratch to provide a minimum required to be set of features in the shortest time possible for MVP purposes. After an initial MVP release, development backlog was planned by the client consulted by the development team-lead.

I've participated in the project exclusively as a front-end React developer. During development was responsible for developing separate modules and bug fixing.

Main responsibilities

- Convert static mockups into React components and layouts
- Pixel perfect design implementation
- React class components to functional components migration
- Integration with Back-end

Technologies and Tools

Typescript, React, Redux, SASS, CSS, Material UI, JSX, HTML, NPM

Node.js, TypeORM, Postgres

Heroku
