Software Developer

April 2021-present
Responsibilities:
- Work on integration of Lightning Web Components with React application using Lightning Out Markup and CometD library for JS as a tool to listen to events from the salesforce side. This all work was done in the POC (proof of concept) scope and part with the CometD library was not resolved yet. But Lightning Web Components already working fine in the react application, and the last step is to make a channel to pass information from salesforce to react application
