Project experience:

Project name:	**Raise the Grade**
Involvement duration:	August 2021 - January 2022 (6 months)
Project role:	Back-end Developer
Project team size:	8 developers

Project description:	Web application for registering for food safety course. This application included different admin and client functionality. Admins were able to create classes and register new Clients, and Clients in their turn register their students for the course. After passing exam, students were given certificates and Client could download it from the system.
Tools and technologies:	Node.js, AWS, NEST, express, DynamoDB

Project name:	**Video surveillance services**
Involvement duration:	June 2021 - August 2021 (11 months)
Project role:	Back-end Developer
Project team size:	2 developers
Project description:	A service that analyses data from video surveillance in the malls and form statistics
Tools and technologies:	Node.js

Project name:	**Online Assessment App**
Involvement duration:	June 2020 - June 2021 (12 months)
Project role:	Full-stack Developer
Project team size:	3 developers
Project description:	App provides users ability to take their practice tests on the go anytime. This app requires user to signup and login. Also provides result analysis of tests taken

Tools and technologies:	HTML5, Angular, Node.js

Project name:	**Hukso**
Involvement duration:	September 2019 - June 2020 (10 months)
Project role:	Full-stack Developer
Project team size:	4 developers
Project description:	Hukso is a London-based startup helping companies to create a healthier working environment. The company takes unique assessments of the working culture and environment, as well as physical and psychosocial status of each employee. Based on this data, Hukso team provides detailed company reports and ways for improvement.
Tools and technologies:	Angular, Node.js

Project name:	**CumulusPro**
Involvement duration:	October 2018 - September 2019 (11 months)
Project role:	Full-stack Developer
Project team size:	3 developers
Project description:	CumulusPro, a Swiss company, is helping businesses to replace traditional paper-based corporate operations with modern digital workflows. CumulusPro solutions are industry agnostic and are built in days not weeks. The solutions help companies improve customer experience and drive operational efficiencies.

Tools and technologies:	Angular 8, Typescript, HTML, CSS, Node.js

Project name:	**Sports & Entertainment Video Streaming Service**
Involvement duration:	March 2018 - October 2018 (8 months)
Project role:	Front-end Developer
Project team size:	6 developers
Project description:	A small company from the US with an ambitious idea of becoming a nationwide football streaming service. The Client was planning to provide access to worldwide football leagues and matches from a bunch of sports channels via applications for smart TVs, tablets, mobile devices, and desktop computers.
Tools and technologies:	JavaScript, ReactJS, Angular, Node.js, Go (golang)
