## Blockchain Developer / Software Engineer

Blockchain and Cryptography, Smart Contracts

### Profile

- Experienced Blockchain Developer / Software Engineer with 6 years of experience in crypto financial and DeFi domains.
- Proficient in programming languages such as Solidity, Python, and JavaScript.
- Strong expertise in blockchain technologies including Uniswap, Ethereum, Polygon, SSV.Network, and wallet integrations.
- Skilled in backend development using frameworks like FastAPI, Flask, and Node.js.
- Familiar with message brokers like Kafka and cloud platforms like AWS and Azure.
- Proficient in DevOps tools like Docker, Kubernetes, and Helm.
- Experienced in working with databases like PostgreSQL, MongoDB, and DynamoDB.
- Strong knowledge of source control systems like Git, Bitbucket, and GitHub.
- Demonstrated ability to design REST API schemas and architect DAO systems.
- Proven track record in blockchain development, smart contract optimization, and security audits.
- Experienced in setting up and configuring network parameters and implementing identity and access controls.
- Proficient in setting up CI/CD pipelines and conducting code reviews.
- Skilled in implementing and managing smart contracts compliant with relevant laws and regulations.
- Experienced in optimizing storage and computation within smart contracts to minimize transaction costs.
- Strong knowledge of SDLC, software development practices, and software engineering principles.
- Excellent communication and team collaboration skills.
- Computer Science and Software Engineering education background.
- Proven ability to find common language with the team and lead on various projects.
