UPSTAFF

Andrii Hrodiuk
Senior Senior FullStack Developer

SUMMARY

Senior FullStack Developer

TECHNICAL SKILLS

Main Technical Skills	ASP.NET, Transact SQL, Microsoft SQL Server
Programming Languages	JavaScript, TypeScript
JavaScript Frameworks	Angular, Node.js, React
.NET Platform	ASP.NET, ASP.NET Core Framework
JavaScript Libraries and Tools	React Native
Databases & Management Systems / ORM	Microsoft SQL Server, PostgreSQL, Transact SQL
UI Frameworks, Libraries, and Browsers	CSS, HTML

l a t e s t   p r o j e c t s

Customer: STASTEK LTD One of the largest logistics companies in the western Ukraine.

Project: International Commodity and Transport Exchange.

Tech stack: .net, .net core, C#, MS SQL, JavaScript, CSS, HTML, Bootstrap.

Position: Software engineer, specialization: Full stack developer

Tasks performed: discussion and assessment of tasks in the sprint, creating , implementing tasks in the source code, troubleshooting application's issues, reviewing other developers' code, pair programming, monitoring application's performance, databases modeling.

Customer: Farvater. The service that was developed by RedMonkey aggregates and processes about 10 million tours in different directions for 250 thousand hotels with different departure dates and many other parameters. An intelligent scanning system for "dirty" data was created. At the peak of the holiday season, our system "passes" through itself up to 200 million different combinations of tours.

Project: Travel Tech.

Tech stack: .net framework and .net core (c#) as backend, MS SQL Server as main database, JS + React as frontend framework.

Position: Software engineer, specialization: Full stack developer

Tasks performed: discussion and assessment of tasks in the sprint, creating unit and integration tests, implementing tasks in the source code, troubleshooting application's issues, reviewing other developers' code, pair programming, monitoring application's performance.

Customer: OSBB WORK. Multistory building management company

Project: Applications for communication and sending reports and documents to residents of multistory buildings.

Tech stack: .net framework and .net core as backend, MS SQL Server as main database

Position: Software Engineer.

Specialization: Backend developer

Tasks performed: discussion and assessment of tasks in the sprint, creating unit and integration tests, implementing tasks in the source code, troubleshooting application's issues, reviewing other developers' code, pair programming, monitoring application's performance.

Customer: NDA - Mobile application for a financial company

Project: Mobile application for clients of a financial institution

Tech stack: .net, .net core, C#, MS SQL, JavaScript, CSS, HTML.

Position: Software engineer

Specialization: Backend Developer

Tasks performed: discussion and assessment of tasks in the sprint, creating, implementing tasks in the source code, troubleshooting application's issues, reviewing other developers' code, pair programming, monitoring application's performance, databases modeling.

Customer: NDA – Mobile application and web application for correspondence that uses the latest approaches to encryption

Project: Communication & secure chatting

Position: Software engineer

Specialization: Backend Developer

Tech stack: End-to-end encryption, symmetric encryption algorithms (AES) and asymmetric encryption algorithms (RSA) React Native, Redux, TypeScript, Fair Base,

Tasks performed: discussion and assessment of tasks in the sprint, creating unit and integration tests, implementing tasks in the source code, troubleshooting application's issues, reviewing other developers' code, pair programming, monitoring application's performance.
