Quick to learn new tools and committed to delivering high-quality work on time.

TECHNICAL SKILLS

Main Technical Skills	AI, 2D graphics, Teamwork
AI & Machine Learning	AI
UI/UX/Wireframing	2D graphics

I am a final-year English Education student with a strong passion for learning, communication, and digital technology. Throughout my academic journey, I have developed valuable skills in research, academic writing, content creation, and problem-solving through various individual and group projects. These experiences have taught me how to manage deadlines, adapt to new challenges, and work efficiently both independently and as part of a team.

In addition to my academic background, I have a strong interest in content creation and video editing. I enjoy creating engaging presentations, editing videos using CapCut, and designing simple but attractive visual content with Canva. I am also comfortable using Microsoft Office, Google Workspace, and AI tools such as ChatGPT to improve productivity and support my work.

I consider myself a detail-oriented, responsible, and fast-learning person who is always eager to develop new skills. I enjoy working on tasks that require accuracy, organization, creativity, and critical thinking. I am able to follow instructions carefully while maintaining high-quality results and meeting deadlines.

As I approach graduation, I am looking for remote opportunities where I can apply my skills, gain professional experience, and continue learning in a dynamic work environment. I am excited to contribute to meaningful projects, collaborate with professionals from different backgrounds, and build a successful career while continuously improving my knowledge and abilities.
