Bestpaul Tobih
Senior Software Engineer | Angular Expert

SUMMARY

A seasoned software engineer with over 5 years specializing in JavaScript/TypeScript and Angular development, this professional demonstrates deep technical expertise, evidenced by robust web application projects and contributions to business growth. Holds a rich engineering background, with a demonstrated history in implementing scalable solutions using frameworks like Angular, Node.js, and containerization with Docker. Technically proficient with modern software development practices including microservices architecture, TDD, and CI/CD, enabling efficient SDLC management. Leveraging a Computer Science degree and fluency in English, the engineer has a track record of mentorship, collaborative feature planning, and execution, underpinning a strong career trajectory within diverse remote and hybrid engineering roles.

TECHNICAL SKILLS

Main Technical Skills	JavaScript (5 yr.), TypeScript (5 yr.), Angular (5 yr.), Node.js (3 yr.), NestJS (3 yr.)
Programming Languages	JavaScript (5 yr.), PHP, Python, TypeScript (5 yr.)
JavaScript Frameworks	Angular (5 yr.), AngularJS, NestJS (3 yr.), Node.js (3 yr.), React, Vue.js
Mobile Frameworks and Libraries	Crashlytics, Ionic
Python Frameworks	Django REST framework, FastAPI, Flask
.NET Platform	Identity Server
PHP Frameworks	Laravel
JavaScript Libraries and Tools	NgRx, RxJs
Data Analysis and Visualization Technologies	Mixpanel, Power BI
Databases & Management Systems / ORM	MongoDB, MySQL, PostgreSQL, SQLite
UI Frameworks, Libraries, and Browsers	Bootstrap 4, HTML5, Socket.io
Cloud Platforms, Services & Computing	AWS
	CD DevOps pipelines

Deployment, CI/CD & Administration	
QA, Test Automation, Security	Cypress, Postman
SDK / API and Integrations	FastAPI, RESTful API
Version Control	Git, Github Actions
Mail / Network Protocols / Data transfer	GRPC
Operating Systems	Linux
Methodologies, Paradigms and Patterns	microservices, OOD, SSR
Logging and Monitoring	Prometheus, Sentry
Other Technical Skills	WSL2

WORK EXPERIENCE

Software Developer, Frontend Application Development

Duration: Oct 2024 - Jan 2025
Summary: Development and enhancement of frontend applications with Angular 18 Signals and TanStack Query, adherence to modern JavaScript ES6+ standards, and collaboration with cross-functional teams for software product delivery.
Responsibilities: Develop and enhance frontend applications, write efficient maintainable code, collaborate with cross-functional teams
Technologies: TypeScript, Angular, Angular Material, PrimeNG, Tanstack Query, Angular Signals

Angular Developer, In-house Platform Enhancement

Duration: Mar 2024 - Nov 2024
Summary: Mentoring junior developers, development and enhancement of in-house platforms including Joble and other Zarttech ecosystem products using Angular 15 and implementing responsive, Figma-designed components.
Responsibilities: Mentor junior developers, develop in-house platforms, transform Figma designs into functional components, collaborate with multidisciplinary engineering teams
Technologies: TypeScript, Angular

Software Developer, Performance Monitoring API and Application Upgrade

Duration: Mar 2024 - Sep 2024
Summary: Development of a Performance Monitoring API to monitor REST API metrics and upgrading an in-house application to the latest version of Angular.
Responsibilities: Develop a Performance Monitoring API, upgrade an in-house application, collaborate with teams
Technologies: TypeScript, Angular, Nebular, Node.js, Tailwind CSS, Ionic, Strapi, Nx Monorepo

Software Engineer, Application Development

Duration: Jul 2023 - Sep 2024
Summary: Development of Agent Mobile Application and Core Banking Application with Angular and TypeScript incorporating best practices and architectural standards.
Responsibilities: Develop Agent Mobile and Core Banking applications, collaborate in a cross-functional team, implement best practices for business solutions
Technologies: TypeScript, Angular, Angular Material, Vue.js, RxJs, NgRx, Ionic, Docker, MySQL, Node.js, gRPC, REST API, Microservice Architecture

Frontend Engineer (Contract), Money Exchange Mobile Application

Duration: Apr 2023 - Sep 2023
Summary: Development of a mobile application for international money transfers and collaboration with teams to ensure smooth data integration and timely delivery.
Responsibilities: Develop a mobile application, create responsive UI components, collaborate with cross-functional teams
Technologies: Angular 8+, TypeScript, Ionic, Postman, AWS, Laravel, PHP, REST API

Software Engineer, Banking/Accounting Application Enhancement

Duration: Aug 2022 - Apr 2023
Summary:

- Implementation of new features for a banking/accounting application using Angular and Nest
- js, development of RESTful APIs, and enhancement of mobile traffic

Responsibilities: Implement new features, build RESTful APIs with Node.js and Nest.js, conduct technical assessments of UX/UI, responsive mobile-first development
Technologies: TypeScript, JavaScript, Angular, Node.js, Nest.js, React, Vue.js, Ionic, Cypress, REST API

Software Engineer, Paygops Application Features

Duration: Aug 2021 - Jun 2022
Summary: Development of new features for Paygops mobile and web applications using Angular 10, creation of modular components and collaborative team work for UI/UX integration.
Responsibilities: Develop new features for Paygops applications, create modular Angular components, work collaboratively for UI/UX integration
Technologies: Angular 8+, Ionic, Python, Flask, PostgreSQL, Postman, SqlLite, Docker, WSL2, Sentry, Power BI

Frontend Engineer, Angular Application Maintenance and Payment Solution

Duration: Feb 2021 - Aug 2021
Summary: Maintained and debugged Angular applications, developed a barcode scanner payment solution, and collaborated on improving customer interactions through feature design.
Responsibilities: Maintain and debug applications, develop barcode scanner payment solution, collaborate with banking consultants
Technologies: Angular 8+, TypeScript, HTML, CSS, Figma, Ionic

Web Developer, Mobile Application and Chatting Module

Duration: Jul 2020 - Mar 2021
Summary: Implementation of test-driven development for mobile applications, RESTful API

design, chatting module architecture, and payment system integration.
Responsibilities: Implement test-driven development, architect and develop chatting module, integrate payment systems
Technologies: Angular 8+, TypeScript, JavaScript, React, Vue.js, Ionic, Laravel, MySQL, Firebase, REST API

Software Engineer, Software Development Projects

Duration: Jun 2018 - Jan 2020
Summary:

- Design and development of ACTIVA POS software, custom Instagram clone API with Node
- js, and implementation of client-side security measures

Responsibilities: Design and develop ACTIVA POS software, build Instagram clone API, implement client-side security
Technologies: JavaScript, PHP, Laravel, MySQL, Bootstrap, Node.js

Founder, Software Technology Lab Initiatives

Duration: Oct 2019 - Present
Summary: Establishment of a software technology lab, development of a document conversion application, implementation of CI/CD pipelines and development of multiple applications.
Responsibilities: Develop software solutions, implement automated testing and deployment, create various applications
Technologies: Angular, SSR, Angular Material, Node.js, Python/Flask, Docker, MySQL, AWS, CI/CD, Github Actions, Mixpanel, Prometheus, Grafana

EDUCATION

- **B.Tech, Computer Science and Engineering**
  Ladoke Akintola University of Technology
