Eugene P.
Senior Senior Full-Stack Engineer (Java + React)

SUMMARY

- Results-oriented Java and JavaScript software engineer with 5+ years of experience developing, testing, and maintaining enterprise software solutions. - Developed and maintained a bunch of advanced projects from use cases and functional requirements. - Good team player, quick learner, motivated and detail-oriented. - Upper-intermediate English - Available ASAP

TECHNICAL SKILLS

Main Technical Skills	Java, React
Programming Languages	Go, Java, JavaScript
Java Libraries and Tools	Apache Camel, Guice, Java EE, JAX-RS, JDBC, JPA, Lombok, MapStruct, Spring IoC, Spring model-view-controller (MVC) framework
Go Frameworks	Gin
Go Libraries and Tools	Gin
Java Frameworks	Hibernate, Spring, Spring Boot
JavaScript Frameworks	jQuery, Lodash, React
JavaScript Libraries and Tools	Mobx, React Native, Redux, Redux-Saga, Redux Thunk, Webpack
Data Analysis and Visualization Technologies	Kibana
Databases & Management Systems / ORM	AWS ElasticSearch, Elasticsearch, Firebase, Hibernate, MongoDB, MySQL, PouchDB
UI Frameworks, Libraries, and Browsers	Bootstrap, CSS, HTML5, jQuery, LESS, Material UI, SASS, Storybook
Cloud Platforms, Services & Computing	AWS, Firebase
Amazon Web Services	AWS API Gateway, AWS EC2, AWS ElasticSearch, AWS Lambda
QA, Test Automation, Security	Apache Maven, JUnit
SDK / API and Integrations	AWS API Gateway, Keycloak, RESTful API, Swagger

Scripting and Command Line Interfaces	Bash
Methodologies, Paradigms and Patterns	Design patterns, MVC
Virtualization, Containers and Orchestration	Docker, Kubernetes
Version Control	Git
Deployment, CI/CD & Administration	GitLab CI, Gradle, Helm, Jenkins
Logging and Monitoring	Grafana, Logstash, Prometheus
Message/Queue/Task Brokers	Kafka
Other Technical Skills	Compose, Hashi Corp Vault, Micrometer, Swagger Client, Zipkin

EXPERIENCE

Senior Back-End Developer, Insurance Platform

April 2021 – April 2022

Description: Platform that provides full functionality for providing insurance in various areas: automotive, real estate, travel, property, health, investment, etc. The system is used by hundreds of thousands of people at the same time, so the issue of good performance and response time
is acute. Part of my job was to develop adapters that allowed the scaling and distribution of responsibilities for different parts of the system. One adapter is a microservice that performs the minimal task, and also collects metrics and sends traces to Grafana & Zipkin, respectively. This ensures effective monitoring of each part of the system and eliminates the possibility of a long downtime in case of failures. Soap requests to credit bureau API for verification, synthetic monitoring & testing.

Technologies: Java 11, REST, Kafka, API Gateway, Apache Camel, Micrometer, Prometheus, Grafana, Spring Framework (Cloud, Security, Boot), Zipkin, Hashi Corp Vault, Keycloak, Kibana,
LogStash, Elastic, Maven, Kubernetes, Helm, Gitlab CI

Senior Full-Stack Developer, Agent Quality-Management Component

June 2019 - March 2021

Description: A component of a huge call-center platform that allows evaluating agent interactions (e.g. calls/chats/emails) quality based on audio/video recordings, emails, chats saved after the interaction. Provides the ability to generate custom forms for evaluation, flexible search for different interactions, and visualizes a timeline that helps to see what happened during the
interaction.

Technologies: Java 11, Spring Boot, Guice, Lombok, JDBC, JUnit, Go, Gin, MySQL, MongoDB, Elasticsearch, JQuery, React, HTML5, CSS3, SASS/LESS, Bootstrap, Material Design

Full-Stack Developer, Magazines Subscription Service

August 2018 - May 2019

Description: Was developed from an old Java application that was used to manually handle subscriptions. All old data was successfully migrated to the new web application, so the customer base was preserved and the subscription process was automated using the GoCardless and PayPal payment systems.

Technologies: Java 8, Spring Boot, Lombok, MySQL, JUnit, Maven, Jenkins, AWS, Elasticsearch,
Hibernate, JPA, React, Redux, Redux Thunk, HTML5, SASS/LESS, Bootstrap, Webpack

Full-Stack Developer, Site Survey Tool

February 2018 - July 2018

Description: The application is designed to enable agents to collect information on equipment from different parts of America. Supports barcode scanning, offline mode, and photo/video collection for completeness of the information.

Technologies: React, Mobx, PouchDB, Swagger Client, Storybook, Lodash, React Native, Java 8, Spring Boot, MySQL, Gradle

Full-Stack Developer, Social Network App

August 2017 - January 2018

Description: Mobile application for a social network that unites people who love to dream. Allows people all over the world to share their dreams and share progress towards achieving them. Has
over 200k downloads.

Technologies: React, Redux, Redux-Saga, Storybook, React Native, Lodash, Java 8, Spring MVC,
Lombok, MySQL, Firebase, Gradle, Hibernate, JPA

Full-Stack Developer, Sales Accounting System

October 2016 - July 2017

Description: A system that helps to control the work of several online bookstores. Integrated with various third-party services to receive information about new arrivals, send sales reports, and send data on new books and prices to different stores.

Technologies: Java 8, Spring MVC, Lombok, JUnit, MySQL, Maven, Jenkins, AWS, Hibernate, Hibernate Envers, JPA, Elasticsearch, React, HTML5, CSS3, Bootstrap
