EXPERIENCE

Full-Stack Developer

Feb -2011 -present

PROJECTS

Full-Stack Developer, Tech-lead Architect.

Description: A project for a wine manufacturing company. The project was written from scratch. Database, compass, entities, models were created on the project. The project lasted 6 months. The team consisted of 5 people.

Technologies: Laravel - Vue JS 3.0.

Full-Stack Developer

Description: The project for personnel assessment (physical and mental health) is built on the same base, on different PHP frameworks. The project has complex functionality that allows different frameworks to interact in one project.

Technologies: Laravel, Codelgniter, Vue J.S(2.0), AWS Cloud.

Full-Stack Developer

Description: The NDA project is a quiz-style game .The admin panel is written in Laravel, the game is written in Next.JS/React, also websockets and back websockets were used. The project is supported in multiple languages. The backend on the project was rewritten completely.

Technologies: Laravel, Next.JS/React.

Full-Stack Developer

Description: Project Calculator is a small business management system, the project is written from scratch

Technologies: Laravel, Vue.

Back-end Developer

Description: The project - a psychological game, for mental health, was written admin for analytics (statistics on the screens (when the person left, when it became bored, etc.)). Also the API for the mobile version was developed.

Technologies: Laravel/Nova

Back-end Developer

Description: The project - the system of management of advertising companies in facebook and instagram - created on a simpler interface, implemented in google and facebook ads, continued work on the existing project and completed it.

Technologies: PHP

Full-Stack Developer

Description: Internal project of the company - Recruiting, written from scratch. System (CRM) which meets the needs for recruitment. A database was created, as well as entities and roles for the stable operation of the system after the recruiter entered the data into the system, offered functionality (approval or denial of the candidate). The system had a calendar for appointing interviews, statuses of the candidate's passing through the recruiting process. The offer was generated automatically and sent to the email. The project is currently under development, it is planned to develop an additional HR part.

Technologies: Laravel, JS

Full-Stack Developer

Description: The project was a marketing tool. There were 3 developers in the team, developed on the project only the back end. A microservice architecture was created. A lot of stack technology was expected (development under AWS) - was the lead developer.

Technologies: Laravel (Lumen)
