Back End Developer - Introduct

2021 - 2022
My main responsibility is maintenance and improvements of the cryptofintech ecosystem and I also had to develop the microservice using Node as a communication layer for integrating with a digital asset transfer system API.

Full Stack Developer - MDM Print

2020 - 2021
Our development team was working on the development of a CRM system. During my work, I managed to add new functional modules, wrote several API integrations, restructure a significant part of the codebase and database.
And also one of my responsibility was to conduct technical interviews of future candidates.

Full Stack Developer - Hicaliber

2020 - 2020
Working as a full-stack web developer in this company, my main responsibility was the team development of CRM systems using Laravel + Vue, restructuring the database, and writing a WordPress plugin for communication with the CRM system.

Full Stack Developer - PrestaCall

2018 - 2020
Our development team has been developing CRM systems written in Laravel + Vue / JavaScript. In the process, I mastered developing hybrid mobile applications using Cordova + Vue, after which, I started learning Flutter and Dart because of upcoming tasks of developing hybrid mobile apps. I also gained practical experience with a microservice architecture written in Node.js (Express) for interaction between an Epson printer connected to a Raspberry Pi and a CRM system using the
Websocket protocol. Based on my skills and experience, I also held the position of interviewer and mentor for new employees in the company.

Full Stack Developer - X-Cloud Solutions

2017 - 2018
In this company, I was engaged in development from scratch as well as the development of existing CRM systems for the internal needs of the company as well as for our clients and partners based on Laravel + Vue / JavaScript (jQuery) in cooperation with a team of web and mobile
developers.

Full Stack Developer - Freelance

2016 - 2017
Starting as a freelancer, I delved deeper into the web development cycle, practiced fundamental technologies such as HTML, CSS, and JavaScript, gained experience with the jQuery library, got acquainted with the AMP stack and CMS WordPress, and refined the functionality in the Yii2 and Symfony projects.
